

## APPENDICES

- A. Step-by-Step Sample Selection in Arc GIS
- B. STATA batch file for sampling households from a municipal parcel database
- C. Step by step procedure for populating MS Access database with block sample data
- D. Block Maps for a Citywide Disaster
- E. Route Scheduling for a Rapid Epidemiologic Assessment
- F. Excel Spreadsheet for Designing a Daily Schedule
- G. Step-by-Step Guide for Resampling Households
- H. Training Materials
- I. Data Dictionary for RNA Questionnaire
- J. STATA batch file for statistical analysis of 30 by 7 cluster sample
- K. EOC Presentation

## Appendix A. Step-by-Step Procedures for Sample Selection Procedures

### A. Spatial Join of Parcel Address Points and Census Blocks (ArcGIS 9.2)

In ArcGIS

- 1) Add census polygon layer: U\_CoB\_y2kblockpoly layer
- 2) Add parcel point address layer: U\_LA\_CoB\_addr\_ppop\_pt
- 3) Highlight parcel point address layer and join the census layer to it
- 4) Name the output file "blks\_address\_land\_use" in the sample selection folder
- 5) Save file as cluster\_sample.mxd

### B. Universe of Blocks and Address Points for Sample Selection

In Excel

- 6) Open the "blks\_address\_land\_use.dbf" file (created in step 4) in Excel
- 7) Save the fields for
  - location ID = LOCATION\_I
  - parcel ID = PARCEL\_ID
  - full address with apt = FULL\_ADDR
  - use code = USE\_CODE
  - use description = USE\_DESC
  - block fips = BLOCKFIPS
- 8) Save files as "blks\_address\_land\_use.txt"

In Word with run cluster\_sample.do

- 9) Select census tracts of interest or do nothing for citywide selection

In Stata,

- 10) execute run cluster\_sample.do (statistical output is in cluster\_sample2008.doc and sample blocks with households to sample are in "cluster30by7addresses.txt")

### D. Visualize Output and Create Maps for Team Assignments (In ArcGIS 9.3)

11. Add base map elements to map in step 1 (saved in step 8)

Streets: cob\_centerline10a

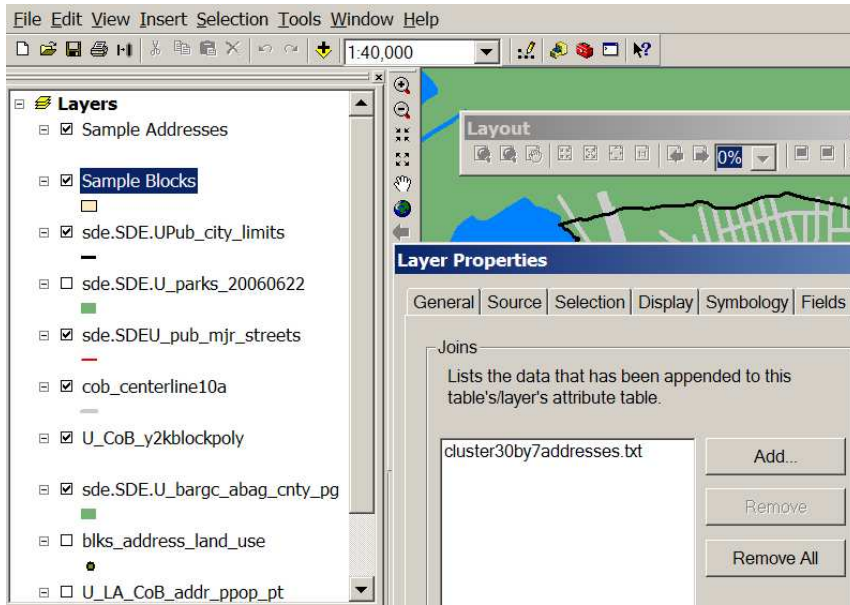

Major Streets: sde.SDEU\_pub\_mjr\_streets.shp

City/County areas: sde.SDE.U\_bargc\_abag\_cnty\_pg

City boundaries: sde.SDE.UPub\_city\_limits.shp

12. to visualize sample blocks, join census blocks U\_CoB\_y2kblockpoly to sample blocks (cluster30by7addresses.txt) on block fips; label with the blockID number

13. to visualize sample addresses/households, join census blocks "blks\_address\_land\_use" to sample blocks (cluster30by7addresses.txt) on location ID; label with full\_address

To generate an overall map of sample blocks

14. Use entire city as the full extent. Turn off labels for centerline and sample address points, turn on labels for major streets, and save map as cluster\_sample.mxd

To generate maps of individual blocks to assign to survey teams

15. Create copy of cluster\_sample.mxd

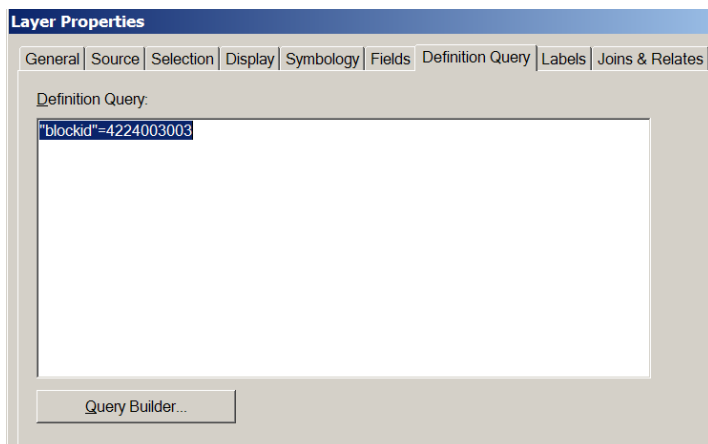

16. Highlight Sample Blocks layer, copy and paste

17. Change layer name to block ID, and click layer on and other block layers off

18. Move layer to below sample block layer

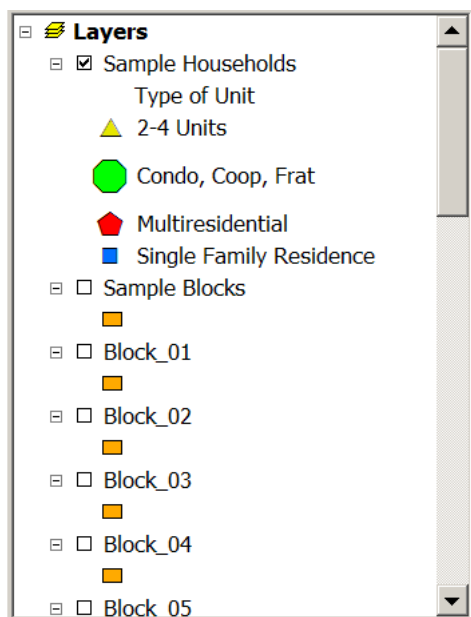

19. Click properties, Definition Query tab: "blockid"=blockidnumber

blockid numbers are listed in STATA output cluster\_sample.doc

20. Change block label using expression "Block " &[cluster\_no]
21. Set map scale to 1:40,000 to locate block
22. Use magnifier tool , draw a rectangle around sample block and include major street
23. Adjust map scale to

Note: some address names and parcel address points overlap and will not be shown on map; Interview must have a complete list of parcel addresses.

24. Change title of map to match block number
25. Cut and paste (from Excel cluster30by7addresses.xls) into map document
26. Print to pdf file (Block\_01.pdf)

27. repeat steps 16-26 for rest of 30 blocks

1 "blockid" = 4211001006  
2 "blockid" = 4212004004  
3 "blockid" = 4213003008

29 "blockid" = 4239021007  
30 "blockid" = 4240013008

## B. STATA batch file for sampling households from a municipal parcel database

```

* cluster_sample2008.do - 6/11/07 - Neil Maizlish
* Analyzes Parcel and address points, Berkeley, 2006
* and selects a cluster sample of 30 Berkeley blocks and 7 residential
housing
* units/block (N=210)

* Output is comma delimited file of FIPS block IDs, addresses, and housing
unit
* description for housing units included in sample.
* Clusters (blocks) are selected PPS using a systematic sample and housing
units
* within blocks are chosen with equal probability (simple random sample)

* Blocks with 0 residential housing units are excluded
* user can select by approximate city council district(s) or census tract(s)

* Data sources for sample frame is address points of parcels for City/County
* (tax) assessor for 2006

program define title1

## Appendix C. Step-by-Step Procedures for Creating an MS Access Database from the Cluster Sample Derived from the Parcel Database

In STATA

1. Create 30 by 7 (N=210) file named "cluster30by7addresses.txt" by doubleclicking cluster\_sample.do

In MS Access

2. Open REA9-5-08.mdb
3. File>Get External Data>Import . . .

4. Use wizard to navigate to correct director and text file "cluster30by7addresses.txt", click import

5. Use Import wizard, select Delimited>Next and  
Click on First Row Contains Field Names  
Select double quotes " as Text Qualifier  
Click on Advanced button

**Import Text Wizard** [X]

What delimiter separates your fields? Select the appropriate delimiter and see how your text is affected in the preview below.

Choose the delimiter that separates your fields:

Tab   
 Semicolon   
 Comma   
 Space   
 Other:

First Row Contains Field Names     
Text Qualifier: {none}

cluster no	sample no	f add	use4cat
1	1	" CRESTON RD APT B"	"Singl

**Appendix G. Step-By-Step Guide For Re-sampling Households**

1. Combine the lists of “All Households On Block” and “Additional Households”.
2. Divide the total number of households by 7. If after dividing a whole number is not produced round up to the nearest whole number. This number is your sampling interval.
3. Pick a random start with-in the first sampling interval.
  - a. Use the list of random numbers (below) to pick the random start.
    - i. Use the first number you come to on the random number list that is with-in the sampling interval as the random start.
    - ii. The random number list has several columns start with the first column the first time you perform re-sampling and use the second column the second time you re-sample household.
  - b. After the selecting the random start select six more households adding the sampling interval to the random start and then adding the 2 times the sampling interval to the random start, then 3 times the sampling interval to the random start, and so on until you have sampled 7 households. For example if your sampling interval is 18 and your random start is 12 then the first sample household is 12 the second is 30, the third is 48 etc.

## Appendix H. Training Materials

# Just In Time Surveyor Training

---

Rapid Epidemiologic Assessment  
DRAFT  
8/15/08

Public Health Division

1

## Survey Purpose

---

- Rapid Epidemiologic Assessment is an approach to estimating a population's needs by surveying a statistical sample. In a 5 minute household visit using a standardized questionnaire, residents are asked about their health status and access to food, water, and other basic services. The results are statistically extrapolated to all households in the disaster area, and include the number of households and individuals with and without service.

Public Health Division

2

## Number of Surveys

- 210 surveys
- 30 blocks
- 7 households on each block

Public Health Division

3

## Map of Blocks To Be Surveyed

Public Health Division

4

## How To Find Households To Be Surveyed

- Use map to get to selected block
- Use block map and address list to find selected households

Public Health Division

5

## What To Do Once You Reach The Selected Block

- Use the list of household on the block to check to make sure no new houses have been added. To do this count all the households on the block.
- If there is more than 10% difference between the number of households on the list and the actual number of households on the block you must re-sample the households to be surveyed using the following method.

Public Health Division

6

## Re-Sampling Households To Survey

- Add the new households to the list of existing households.
- Divide this new number by 7, this will give you your sampling interval.
- Choose a random household to start with in the first sampling interval using the random number table on the Re-Sampling Guide.

Public Health Division

7

## Reselecting Households To Survey Cont.

- Using the random start and the sampling interval select 7 households to survey.
- Reminder: Only do this if there is more than a 10% difference between the listed number of houses and the actual number of houses.

Public Health Division

8

## If No One Is Home

- Note the time and return later in the day.
- If on the second attempt no one is home, attempt to ask a neighbor for information on the survey about the selected household. DO NOT ask the neighbor for information about his/her house.
- If a neighbor is not available and the house appears to be completely destroyed complete the survey as appropriate.
- If a neighbor is not home and the house is intact note that you were unable to complete the survey.

Public Health Division

9

## How To Handel Refusals

- Too busy - Offer to return later that day
- Won't know answers - Reassure there are no right or wrong answers
- Not interested - Try one attempt to encourage participation. Thank them & leave if refuses (note the refusal)
- Refused rudely - Thank them & leave (note the refusal)
- Refuse to answer specific question leave question blank and go on with next question.

Public Health Division

10

## What To Do When You Get To The Door

---

- Introduce Yourself
- Why we are doing survey
- How long it will take
- What will be done with the info

Public Health Division

11

## How To End The Survey

---

- Thank the respondent
- If you have an incentive give it to them
- Ask if they have any questions

Public Health Division

12

## How To Use The Handhelds

Public Health Division

13

## How To Use The Radios

- Turn on radio using volume dial.
- Set the channel to 3 (dial at the top of the radio with numbers on it).
- Hold down the large button on the left side when sending a message.
- When using keep the antenna away from your face, and hold radio 4 to 6 inches from your face.
- Practice using radios.

Public Health Division

14

## Practice

- Do a roll play of the survey with the person next to you.

Public Health Division

15

## Stay Safe

- Work in pairs
- Check for loose dogs; If there are loose dogs, skip and note
- If you feel in any way unsafe approaching a house or an apartment, skip and tell team leader
- Be conscious of your surroundings – Use common sense

Public Health Division

16

## Schedule

Time	Activity	Location
8:00	Meet	Office
8:05	Check supplies	Office
8:15	Review days schedule	
8:30	Depart for meeting point	
9:00	Depart for first block	
9:35	Begin enumerating block	Block
9:50	Begin re-sample process (if necessary)	Block
9:50	Survey Households	Block
10:25	Depart for next block	Block
11:00	Begin enumerating second block	Block
11:15	Begin re-sample process (if necessary)	Block
11:20	Survey Households	Block
11:55	Depart for meeting point	
12:45	Lunch	Meeting Point
12:45	Data check by team leader	Meeting Point
1:00	Meet with runner	Meeting Point

Public Health Division

17

## List of Items To Bring

1. **Nametag**
2. **Handheld uploaded with surveys**
3. **Paper copies of surveys**
4. **Pencils**
5. **Clipboard**
6. **Map to the selected block**
7. **Map of houses on selected block**
8. **Map of closest disaster relief stations**
9. **List of existing households on the block**
10. **Cell phone/Radio**
11. **Contact information for other team members**

Public Health Division

18

## Rapid Epidemiologic Assessment Step-By-Step Guide

Today's Date: \_\_\_\_\_ Assigned Block: \_\_\_\_\_  
 Interviewer: \_\_\_\_\_  
 Supervisor: \_\_\_\_\_ Supervisor's telephone #: \_\_\_\_\_

1. Arrive a designated block.
2. Begin enumeration of all households on the designated block.
  - a. If you are in a group divide the streets on the block, each person can enumerate half of the block.
  - b. Use the list of households titled "All Households On Block" to find houses on block.
  - c. If there is a household that is not on the list "All Households On Block" add the address of the house household to the form titled "Additional Households On Block".
  - d. When you have finished with your designated streets meet with the other member of your group.
  - e. Your team member should have his/her own "Additional Households On Block" form combine the two forms.
  - f. Number the additional households on the block consecutively starting with the one number greater than the number from the list "All Households On Block". For example, if the list of all households on the block ends at 45 begin numbering the additional households on the block at 46.
  - g. If the number of additional households on the block is greater than 10% of the number of households on the list "All Households On Block" follow step-by-step guide to re-sampling.
3. Begin survey of designated households.
  - a. If in a group of 2 divide designated households on the "Selected Households" list.
  - b. Survey households either using the handhelds or paper surveys.
    - i. If no one is home note the time and return at a later time to complete the survey.
    - ii. If on the second attempt no one is home ask a neighbor questions about the designated household.
  - c. Finish surveys and meet with other group member.
4. Check in with team leader using radios/cell phone.

Continue to your next assigned block and repeat steps 1-4.

## Appendix I. Data Dictionary for Rapid Epidemiologic Assessment

### 1. Questionnaire

Name	Definition	Type	Width	Data Validation
date_svy	Date of survey	D	10	mm/dd/ccyy
time_svy	Hour of survey	D	4	Hour:min (military)
blockid	Cluster or block ID number	N	5	US Census FIPS
smp1_wt	Sample weight from PPS selection	N	10	(populated from parcel database)
suv_number	Survey number	N	10	obligatory
address	Street address	T	30	(populated from parcel database)
svyr_id	Surveyor ID	N	5	
hu_cob	Number of households in cluster/block according to parcel database	N	4	continuous
hu_new	Number of households in cluster not in parcel database observed in field	N	3	continuous
time_trv_to	Time to travel to the block from the public health department offices	N	3	minutes
time_trv_from	Time to travel back to the public health department offices from the block	N	3	minutes
time_enum	Time it takes to enumerate all the houses on the block	N	3	minutes
resample	Survey is a resampled household	N	1	1=yes 0=no
nosurvey	Unable to complete survey because?	N	1	1=refusal 2=house destroyed 3=no one home 4=other
home_type	What type of house is it (interviewer answers not respondent)	N	1	1=Single family house, 2=2-5 family unit, 4= ≥6 units, 5=migrant camp, 6=mobile home
ans_type	Was this survey answered only by the interviewer? (i.e. house was destroyed and respondent is gone)	N	1	1=yes 0=no
home_dam	Damage to home?	N	1	1=None, 2=Damaged/habitable, 3=Damaged/uninhabitable/repairable, 4=Damaged/uninhabitable/destroyed
people_pre	Number of people in home pre disaster	N	2	continuous
people_post	Number of people in home post disaster	N	2	continuous
shelter	Where people who did not stay at home stayed	N	1	1=Shelter, 2=Special Needs Shelter, 3=Hotel/Motel 4=Neighbor's Home, 5=Other
less_2years	Number of people in home less than 2	N	2	0-9, >9
preg	Number of people in home who are pregnant	N	2	0-9, >9
more_64years	Number of people in home over 64	N	2	0-9, >9
run_water	Running water?	N	1	1=yes 0=no
water_source	Where they get water from	N	1	1=well 2=bottle 3=public 4=none
generator	Have they used a generator?	N	1	1=yes 0=no

Name	Definition	Type	Width	Data Validation
gen_loc	Where the generator is located	N	1	1=indoor 2=garage/shed 3=outside 4=carport 5=other
co_alarm	Do they have functioning co alarm	N	1	1=yes 0=no
toilet_work	Does the indoor toilet work	N	1	1=yes 0=no
toilet_access	Do they have access to a toilet that works	N	1	1=yes 0=no
telephone	Do they have a working telephone	N	1	1=yes 0=no
transport	Do they have transportation	N	1	1=yes 0=no
radio_work	Do they have working radio	N	1	1=yes 0=no
media_access	Do they have access to the news	N	1	1=yes 0=no
gas_off	Has the gas been turned off to the house	N	1	1=yes 0=no
trash_disp	Are they having difficulty with trash disposal	N	1	1=yes 0=no
injured	Was anyone injured	N	1	1=yes 0=no
inj_care	Were they able to get the care they needed	N	1	1=yes 0=no
ill_anyone	Is anyone ill	N	1	1=yes 0=no
ill_care	Were they able to get the care they needed	N	1	1=yes 0=no
medical	Does anyone now require care	N	1	1=yes 0=no
diarrheal	Does anyone have a diarrheal illness	N	1	1=yes 0=no
respiratory	Does anyone have a respiratory illness	N	1	1=yes 0=no
rash	Does anyone have a rash	N	1	1=yes 0=no
chronic	Does anyone have a chronic illness	N	1	1=yes 0=no
emo_ill	Does anyone have an emotional illness	N	1	1=yes 0=no
rx_access	Are they able to get their medication	N	1	1=yes 0=no
rx3days	Do they have enough medication for 3 days	N	1	1=yes 0=no
food3days	Do they have enough food for 3 days	N	1	1=yes 0=no
emotional	Are they not able to take care of themselves or dependents because of emotional problems	N	1	1=yes 0=no
soc_sup	Do they have access to support networks	N	1	1=yes 0=no
dis_relief	Have they received disaster relief such as food, water, ice, or shelter from disaster relief stations?	N	1	1=yes 0=no
no_dis	If no why?	N	1	1=didn't need relief 2=couldn't get there, 3=didn't know about them, 4=other 1=food 2=water 3=electricity 4=medical care 5=medications 6=transportation 8=other
greatest_need	What is there greatest need	N	1	open ended
other_need	What other need do they have	N	40	open ended
petsnum	Number of pets in the house	N	2	0=none
birds	Number of birds in the house	N	2	
cats	Number of cats	N	2	
dogs	Number of dogs	N	2	
livestock	Number of livestock	N	2	
rodents	Number of rodents	N	2	
otherpets	Number of other pets	N	2	
pet_food	need pet food?	N	1	1=yes 0=no
pet_med	need pet meds?	N	1	1=yes 0=no
pet_crate	need a crate for pet	N	1	1=yes 0=no
		N		
pet_leash	need a leash	N	1	1=yes 0=no

**2. Block Activity Form**

Name	Definition	Type	Width	Data Validation
cluster_no	Block identifier (1-30)	N	2	1-30
blockid	Census ID number	N	5	Census
block_svy_date	date of survey	D	10	mm/dd/ccyy
supervisor	Text name of supervisor	T	50	
svyr_name	Surveyor name	T	50	
resample_block	resampled household	N	1	1=Yes 0=No
hu_new	number of households on block based on direct observation	N	3	0-999
time_leave_HQ	Hour:minute depart headquarters/last block to go to first/next block	D	4	HH:MM
time_arv_block	Hour:minute arrive first/next block to go to next block	D	4	HH:MM

## K. Presentation to management of the Emergency Operations Center (EOC)

# Rapid Epidemiologic Assessment

The City of Berkeley  
Public Health Division

DRAFT - 9/19/2008

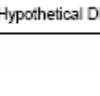

Hypothetical Disaster

1

## Purpose and Uses of Rapid Epidemiologic Assessment (REA)

- To provide timely, statistically valid information on households' and population health status, access to housing, food, water, public services and other services in the wake of a disaster.
- To improve the timeliness and targeting of disaster relief and demobilization.
- To monitor the effectiveness of disaster relief activities.

Hypothetical Disaster

2

## Methods

- On 9/14/2011, interview teams went to 30 randomly selected blocks in the disaster area
- The interviewers randomly selected 7 households on each block and interviewed 1 resident per household.
- In a 5-interview, the resident was asked about food, water, illness/injury, utilities and other services, and their health
- A total of 210 households were interviewed.

Results: Number and Percent of Berkeley Households' and Residents' Post-Disaster Status on Food/Water, Shelter, and Services

Characteristic	Households		Population	
	Percent	N	Percent	N
<b>Total</b>	100	50,322	100	91,538
<b>Housing/Shelter</b>				
Damaged housing	45	22,525	45	40,976
Slept in shelter last night	46	23,004	46	41,935
<b>Food/Drinking Water</b>				
<3 days supply of food	33	16,774	65	59,188
No access to drinking water	11	5,272	11	10,304
<b>Utilities</b>				
No electricity from power company	80	40,018	81	74,045
No working telephone	57	28,755	55	50,562
No working radio	25	12,461	25	22,765
No trash pick-up	86	43,133	86	79,077

Results: Number and Percent of Berkeley Households' and Residents' Post-Disaster Status on Food/Water, Shelter, and Services

Characteristic	Households		Population	
	Percent	N	Percent	N
<b>Vulnerable Populations</b>				
Infants (<2 years)	7	3,594	6	5,032
Seniors (>64 years)	30	15,097	26	24,202
Pregnant	3	1,677		
Anyone injured	3	1,438		
Anyone ill	9	4,553		
Require medical care	6	3,115		
< 3 days supply of meds	11	5,511		
<b>Pets at home</b>	37	18,691		
Food	6	2,876		
<b>Self-reported greatest need</b>				
Food	11	5,272	11	9,586
Water	34	17,253	35	32,350
Electricity	11	5,751	12	10,544
Medical care	15	7,668	15	13,659
Medications	12	6,230	11	10,304
